

# Redesign Zoomcar app

## Project Deliverables

User Interface (Mobile)  
Hifidelity Mockups

## My Role

UI/UX Design  
Illustrations

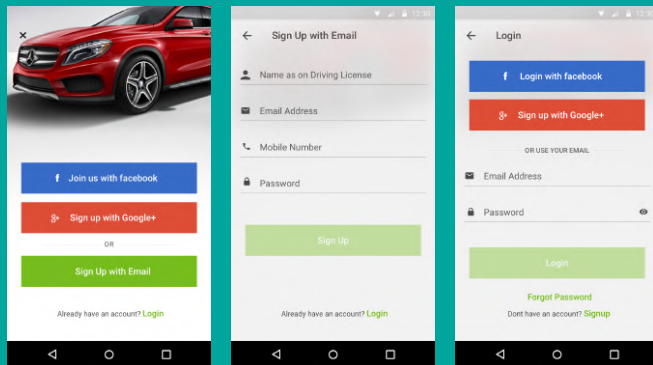

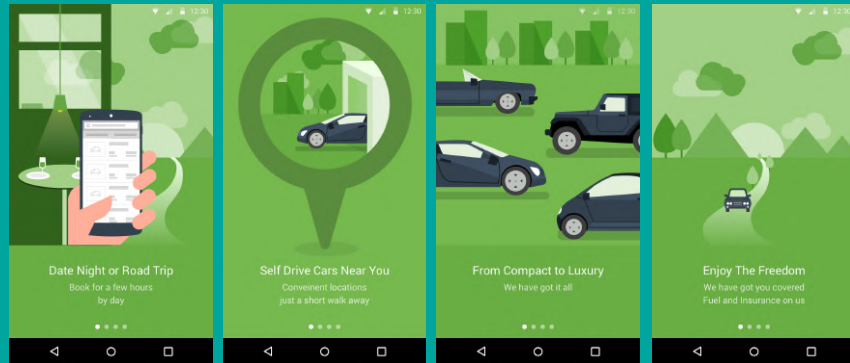

## Timeline

3 months

## Onboarding

Onboarding screens help provide context and expectations about the product, service and its features and well use cases too.

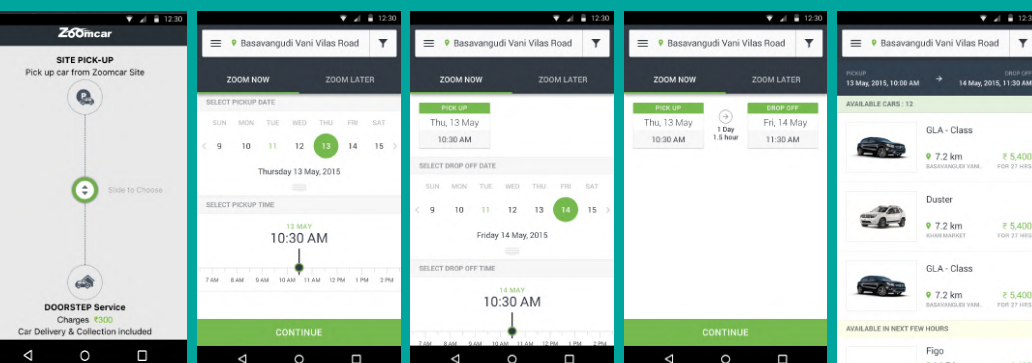

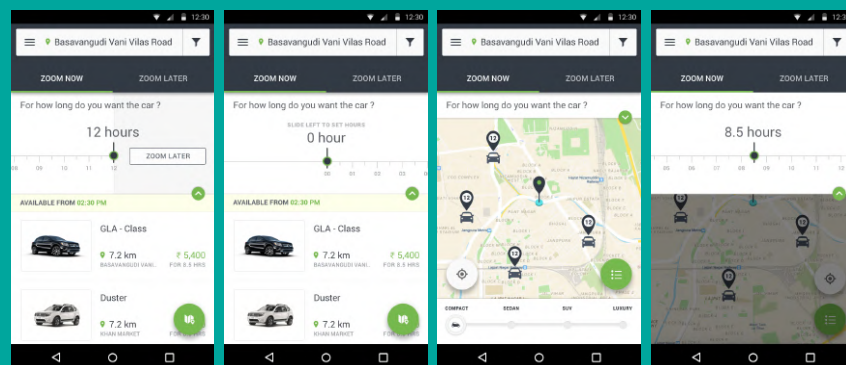

## Login & Signup

The flow for instant same day booking with minimum clicks. Users can also check available cars and book from the nearest location.

## Zoom now

The flow for instant same day booking with minimum clicks. User can also check available cars and book from their nearest location from the maps.

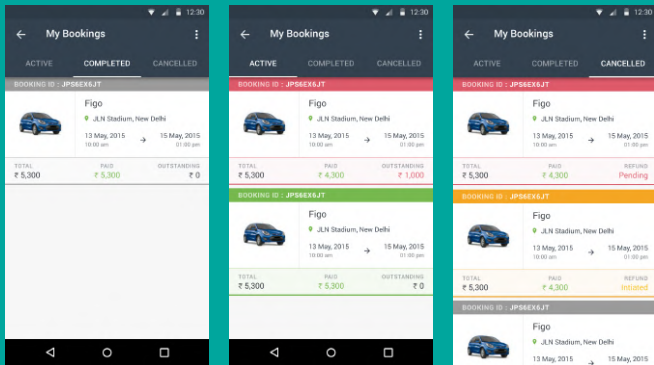

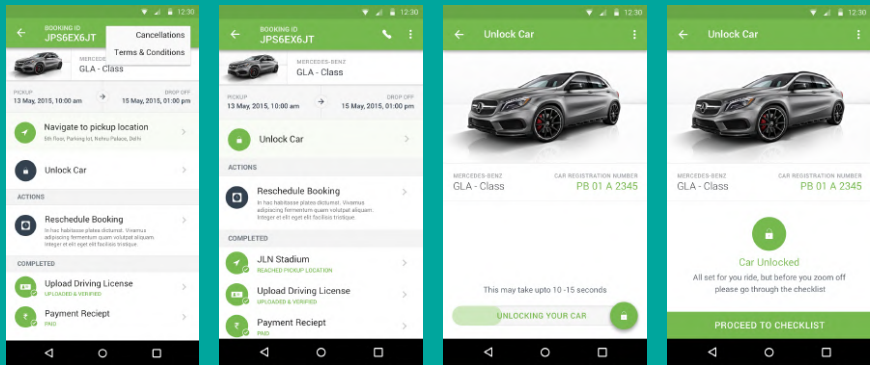

## Zoom later

Users can select Self-pickup or Doorstep delivery with just a swipe and make bookings for longer durations.

## Unlocking the car

To make the overall booking experience hassle-free we offer keyless entry. Users can just unlock the car with their app. It's that smart.

## My bookings

Booking details all are in one place. This flow has all the active, completed and canceled bookings.

## Error Screens

I don't want those boring error screens so I made it contextual and fun.
